EDUCATION

Master of Computer Applications (MCA) — Jorhat Engineering College 2023 – 2025
Bachelor of Computer Applications (BCA) — Dibrugarh University 2020 – 2023

EXPERIENCE

Software Engineer — Full Stack & AI Oct 2025 – Present
Answerwriting AI — *multi-tenant B2B and B2C platform, 35,000+ users; one of two engineers*

- **Diagnosed and fixed a payment bug** leaving about **1 in 9 purchases** without access (Razorpay webhook off 6 months); shipped **idempotent, row-locked completion** with **5-minute reconciliation** and failure alerts.
- **Engineered backend LLM evaluation pipelines** (**22 Gemini prompts**, schema-validated output, dedicated Hindi and grammar evaluators) with **abortable timeouts** and a 5-minute sweep that fails jobs stuck over 30 minutes.
- **Architected the backend for a digital store** (**26 API routes**, **6 Prisma models**, Razorpay checkout, entitlements) with **private AWS S3 storage and expiring signed URLs**, and wrote **46 database migrations** across the platform.
- **Hardened the referral and wallet system**: built an **idempotent daily release cron** with per-tenant failure isolation, fixed **two race conditions** (withdrawals, admin approve/reject), blocked **self-referral** at every checkout path, and cut the cooling period from 7 to 3 days with a backfill script (39 backend tests).
- **Corrected production data-integrity bugs**: a **cross-user leak** in question-paper caching (299-line regression test), GST invoices with tax stored **100x too small** (with repair scripts), and **26 analytics issues** validated with 215 checks.
- **Designed a resumable LLM batch classification pipeline** for AI Mentor across **11 subjects**: **zero failures** on a 200-conversation production pilot, then run against a **6,505-conversation backlog**.
- **Stabilized the Current Affairs LLM pipeline**: output validation with retries and a failures table, per-article retry after batch failures (halt limit raised from 2 to 5), recovery of truncated LLM output, and **queue-based lazy translation** across 9 languages that never translates the same article twice.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python (FastAPI), SQL
- **Backend & APIs:** Node.js, Express.js, RESTful APIs, JWT, Zod, Razorpay (webhooks), cron jobs, Redis
- **Databases:** PostgreSQL, Prisma ORM, MongoDB, Mongoose
- **AI & LLMs:** Gemini API, Google Search grounding, prompt engineering, structured output, LLM evaluation
- **Cloud, DevOps & Testing:** AWS EC2, AWS S3, AWS Secrets Manager, PM2, Nginx, GitHub Actions, Docker, Linux, Jest, Vitest
- **Frontend:** React.js, Next.js, Redux, Tailwind CSS

PROJECTS

Smart Contract Auditor (Web + CLI Tool) Link

Node.js, TypeScript, Next.js, CLI, Gemini AI

- **Developed** a backend service, CLI and web interface that generate **structured Solidity audit reports**.
- Paired **deterministic validation** with Gemini analysis to keep LLM output in a structured format.
